Universidade Federal de Santa Maria
Departamento de Computação Aplicada
Disciplina: Computação Gráfica Avançada
Prof. Cesar Tadeu Pozzer

Alguns dos Jogos desenvolvidos na disciplina de CGA

Guilherme Einloft – 2025 - Gênero: Plataforma 3D. Ferramentas: C + OpenGL. Tecnologias usadas: Swept AABB, voxels, steering behaviors, shaders

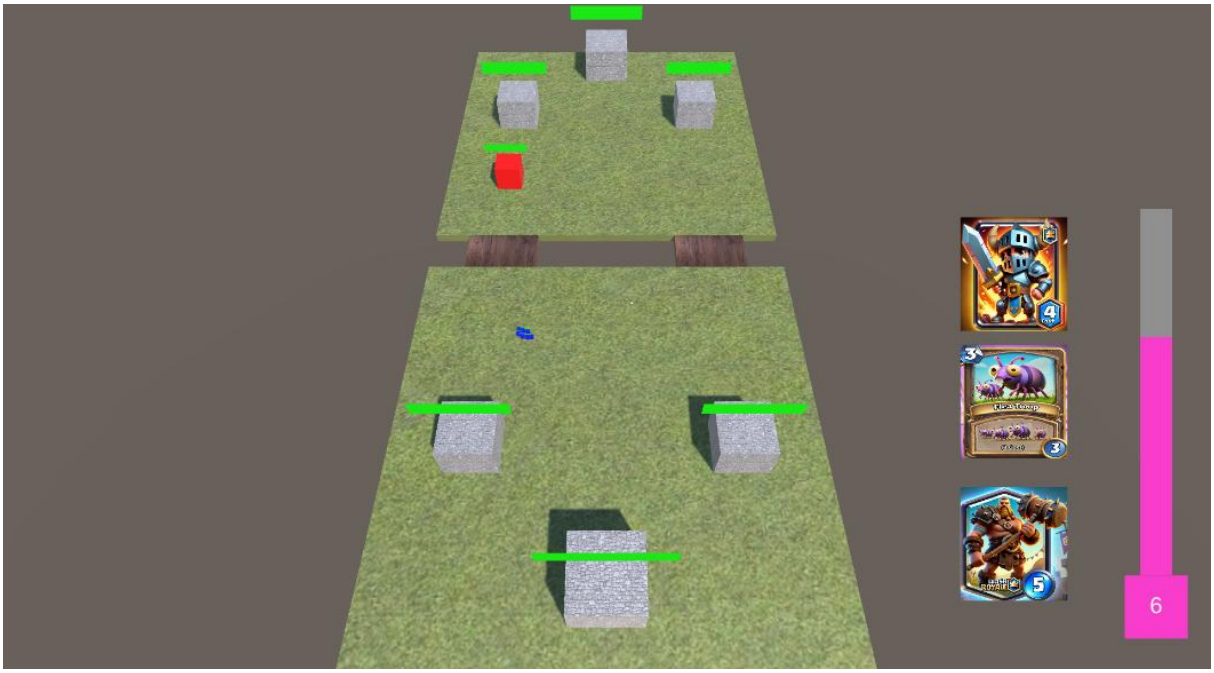

Rodrigo Appelt - 2024 (Unity) - Clone de Portal 2 com foco nos gráficos, portais, iluminação e carregamento dinâmico de níveis.

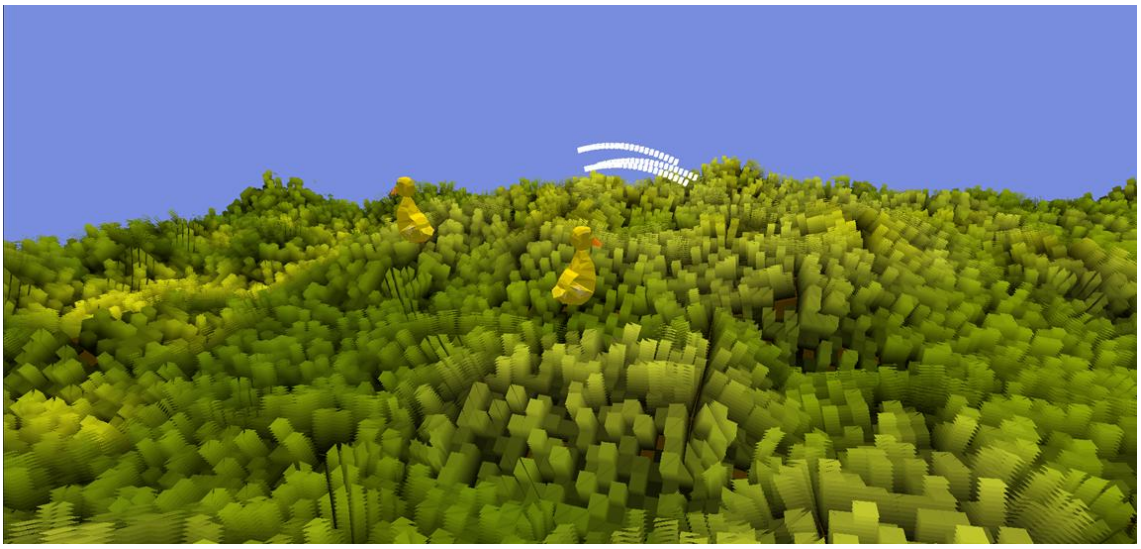

Fernando Pozzer – 2024 - Foi implementado um Clash Royale na Unity. Foco maior em algoritmos de IA.

Juliano De Mello Pasa – 2023 - OpenGL usando VAOs e VBOs. LOD de terreno, Shell Texturing, Steering Behavior, FSM, Quaternions (SLERP)

Luís Henrique Chesani – 2023 (shader, FSM, particles, root motion animations, steering behavior, motion capture animations, decision tree)

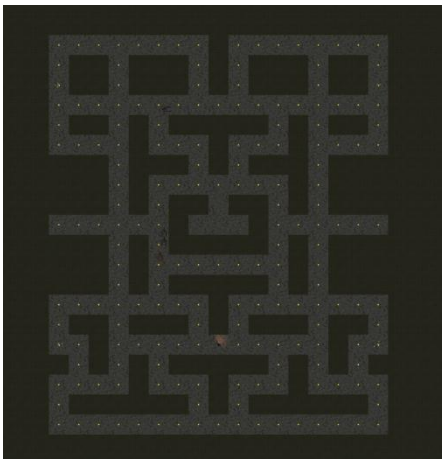

Deivis Felipe Guerreiro Fagundes – 2023 (Godot, Horror Game)

Pedro Henrique Hinerasky – 2023 (RPG, Steering Behaviours, Sistema de Regras, Post Processing, Shader)

Gustavo Machado – 2023 (Pac-Man, Unity 3D, FSM, steering behavior, shaders)

João Davi Rigo Mazzarolo – 2023 (Modelagem, Unity, Steering Behavior, Física, Luta 3D)

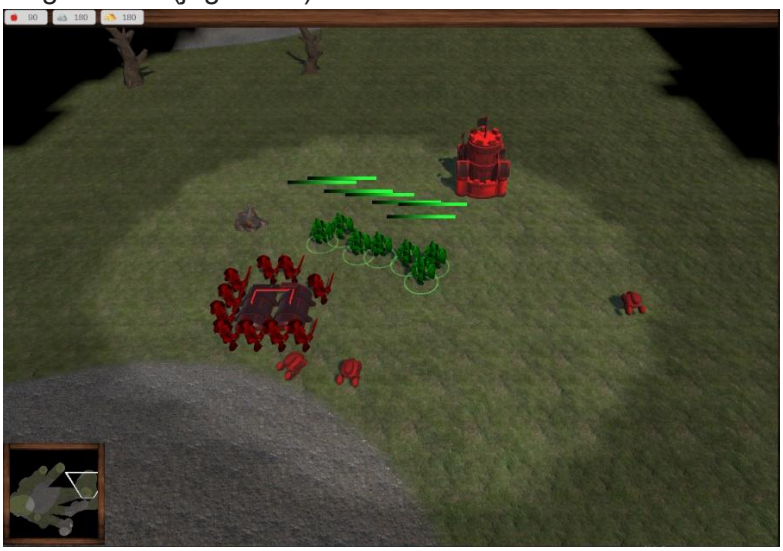

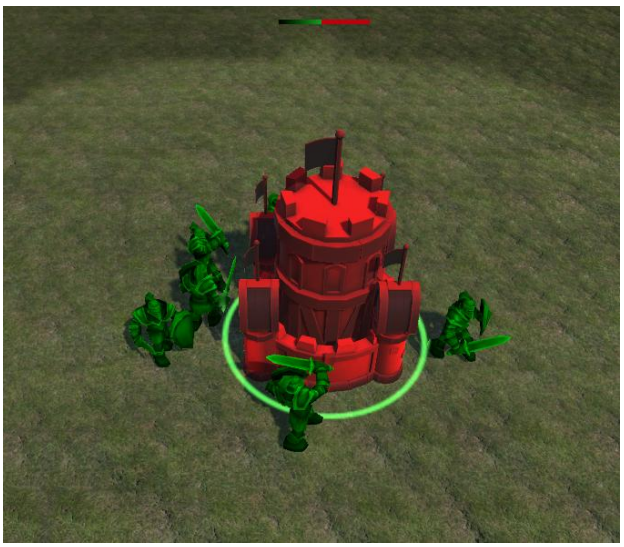

Alfredo – 2023 (card game, decision tree, unity, harvest, cartoon)

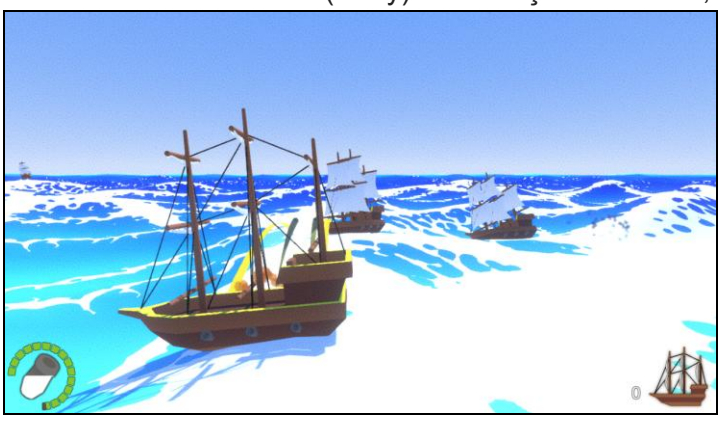

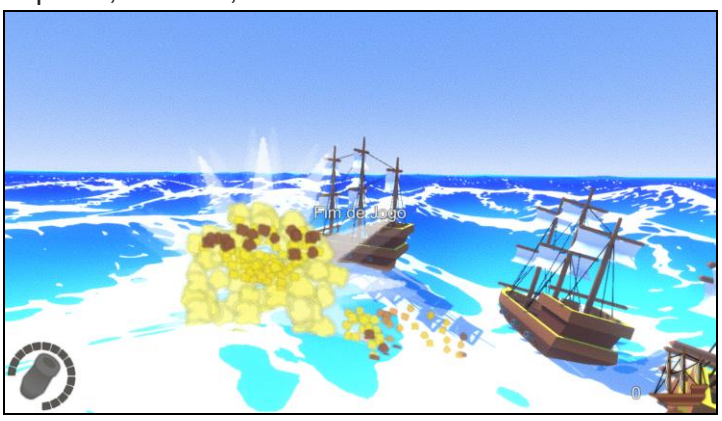

Luigi – 2022 (jogo RTS)

Alexandre Brites – 2021 (Unity) - Simulação de ondas, disparos, shaders, dinâmica dos navios

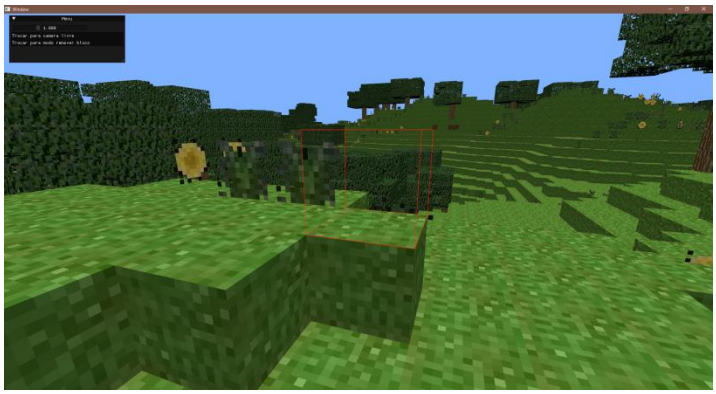

Lucas – 2021 (Unity)

Rodrigo – 2021 (OpenGL)

Roberto/Lorenzo – 2020 (Vulkan)

Natan – 2019 (foco em IA)
